If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

Applicants' remarks filed on September 18, 2008, have been carefully considered. No claims have been canceled or added; claims 1-30 remain pending in this application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Applicants' Priority Document was filed on April 3, 2006.

Withdrawn Rejections

The following rejections of record have been withdrawn in view of Applicants' persuasive arguments:

1. The 102(b) rejection of claims 1-9 and 13-19 as being anticipated by Japanese Patent No. 11-043770 (Applicants' submitted art), and
2. The 103(a) rejection of claims 10-12 and 20-30 as being unpatentable over Japanese Patent No. 11-043770 (Applicants' submitted art).

Allowable Subject Matter

2. Claims 1-30 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest the claimed method of producing a substrate having a carbon-doped titanium oxide layer, characterized by (a) directly striking a combustion flame of a gas consisting essentially of a hydrocarbon against a surface of a substrate having at least a surface layer comprising titanium, a titanium alloy, a titanium alloy oxide, or titanium oxide, to heat-treat the surface of the substrate such that a surface temperature of the substrate is 900-1500°C, or by (b) heat-treating the surface of the substrate in a combustion gas atmosphere of a gas consisting essentially of a hydrocarbon such that the surface temperature of the substrate is 900-1500°C, thereby forming a carbon-doped titanium oxide layer.

As stated in Applicants' remarks, the reference applied against the instant claims in the previous Office Action (JP '770) taught the formation of a titanium oxide film by oxidizing a titanium metal in air at room temperature, in an atmosphere of heated air, or in a forced oxidizing atmosphere, said film preventing or limiting the infiltration of activated carbon ions into the titanium metal during plasma heating treatment. Thus, the Japanese Patent '770 does not teach or suggest the formation of a carbon-doped titanium oxide layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Exemplary art includes:

European Patent Nos. 1 693 479 and 1 693 480, which have the same inventive entity as the instant application, and were both published subsequent to the effective filing date of the instant application. Further, EP '479 is equivalent to the instant application.

Japanese Patent Publication Nos. 2006-243044 and 2006-239474, which have a common inventor with the instant application, but were also published subsequent to the effective filing date of the instant application.
